

Statistical Manifolds admitting Torsion and Partially Flat Spaces

by Masayuki Henmi and Hiroshi Matsuzoe

Comments for the authors

This enjoyable chapter gives a clear description of the relationship between statistical manifolds admitting torsion, pre-contrast functions, and estimating functions.

I have only a few minor comments.

When citing a book, it is helpful to give a page or section number.

- 5^{15,16,18}: It would be helpful to insert a comma before ‘ Z ’.
5²²: I think that ‘0’ on the right hand side of (a) should be replaced by ‘ $f_1\rho(X_1, q) + f_2\rho(X_2, q)$ ’.
Do you require this to hold just at $p = q$?

Minor misprints, etc.

- Abstract, lines 11, 12: ‘manifold’.
Abstract, line 15: ‘a canonical’.
1₃, etc: Delete ‘two’.
2⁹: ‘the other is not necessarily so’.
2₁₆, etc.: ‘possible’
2₁₀.: ‘proceedings’
2₈: ‘neither of which was included’
3¹⁰: ‘imply’
5₄: ‘as for a contrast function’
6¹⁵: ‘at p ’
12¹¹: ‘space’
13¹⁰⁹: ‘Methods’
